warehouse keeper

/** Informal Definition **/

MetaShoppers website is a brand-new e-commerce store (B2C), with the power of AI to enhance productivity.

/ Symbols Definition **/**

Symbol	Definition

MSW	Meta Shoppers Website
SEL	Seller
CUST	Customer
INV	Inventory
ORD	Order
COP	Copoun
CRIT	Critic
COMM	Comment
AI	Artificial Intelligence (AI)
LAND_P	Landing Page
PROD	Product
CART	Cart
WISHL	Wishlist
WHK	Warehouse Keeper
=>	Forward Interaction
<=	Backward Interaction
<=>	Two-Way Interaction
=?	Vague Interaction
?	Unknown Entity
*	EVERY ELEMENT AVAILABLE

/ VERY GENERAL Scenario **/**

Assuming that MSW supports Shop-To-Go (Order without logging in!),

A CUST surfs on the internet and finds MSW, and they decide to visit it. They arrive at LAND_P.

They may look for a PROD they desire that is provided by a SEL, so they search it on MSW.

If they find the PROD they are looking for, then they may look at its price. If satisfied, they'll add it to their CART.

On the other hand, if the item is too expensive/not available at the moment, they may add the PROD to their WISHL.

INV is always checked to update availability of current PRODs.

When done, the CUST will finalize their CART.

They may provide a COP for discount, so its validity must be checked.

Afterwards, they will be taken to the payment page.

If the result of transaction is successful, an ORD is submitted for the user with a unique ID which can be tracked.

WHK may manipulate products, which the process can become way easier with the help of AI. They can read a PROD's barcode, and then it is submitted in INV (an example).

A CUST may empty their WISHL.

Some CUST or approved CRITs may leave COMMs under PRODs pages.

/ Numerical constants **/**

Not anything meaningful to be taken care of at the moment... Assume all N.

/ Interactions **/**

MSW <=> *

CUST, SEL => PROD

WHK => PROD

CUST => ORD

LAND_P <= CUST, SEL, PROD

CART <=> WISHL

CUST => WISHL, CART

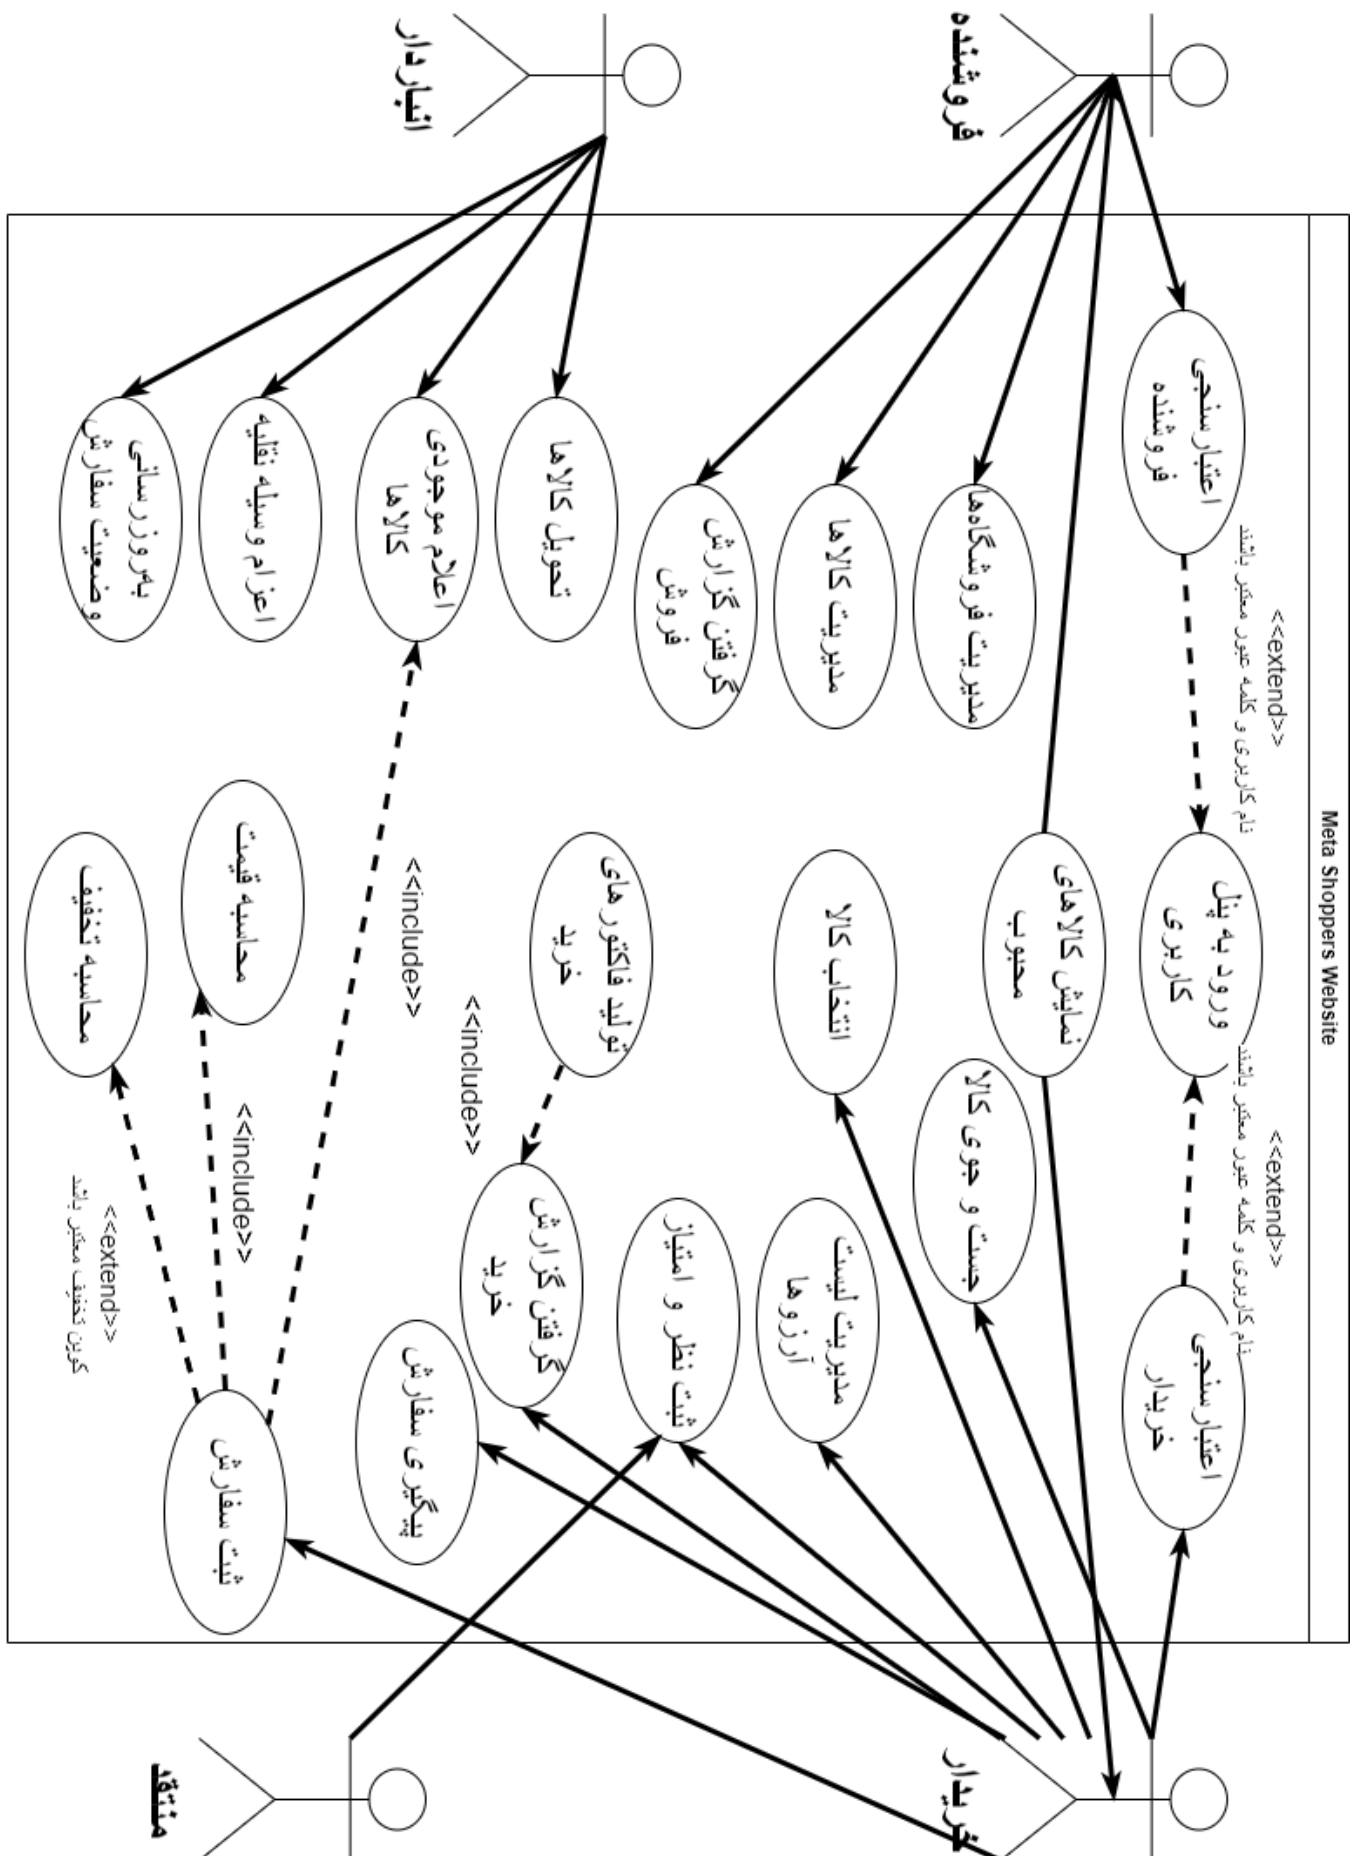

SEL =? WHK

AI <=> CUST, SEL, WHK

In the name of God
